Map data from: <https://goo.gl/q0LzgY>
March 2017

The proportion of tweets sent in 2012 and 2015 in different parts of Singapore are rather different.

In 2012, more tweets were sent from tourist hotspot Sentosa and Marina Bay, as well as expats' working region Jurong Island, probably because by then Twitter has more popularity among foreigners.

In 2015, the regions with higher prevalence of tweets are spread somewhat evenly across Singapore, indicating that Twitter may have gained general popularity among local residents.
